

Integrated Logistics Support

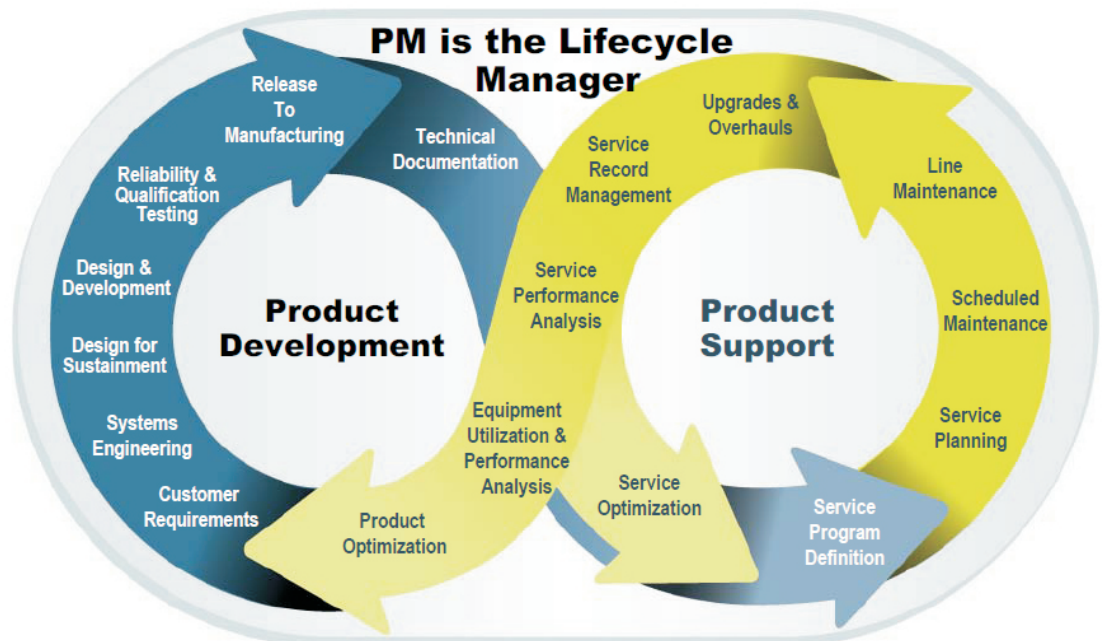

BFS Integrated Logistics Support Services

Integrated Logistics Support (ILS) is considered to be the disciplined procurement and management of the "logistics elements" (Manpower and Personnel, Maintenance, Training, Supply, Transportation, Computer Support, Tools and Test Equipment) that impact the planning, funding and support of systems or sub-systems throughout its total life cycle.

ILS products normally required for this complex series of activities range from Level of Repair Analysis (LORA) to technical publications; from repair parts provision to packaging solutions; from development of intrusive diagnostics to the conduct of Logistics Demonstrations.

BFS recognizes that good ILS planning and execution is essential for a newly fielded system to meet its intended performance requirements, to be developed at a reasonable price and to be fully supported from start to finish.

Our services cover the entire scope of product lifecycle management:

Development of a comprehensive Logistics Support Plan based upon a detailed analysis of engineering design data is essential to establishing the most cost-effective approach to ensuring optimum system or mission availability and success. Our ILS specialists work with your engineering design and management teams to influence system design based on operational and support considerations. We develop systems that use and re-use your data and effect system-wide integration to change the way your process flows - and the results.

Talent

With a highly skilled talent pool of logisticians, engineers, data analysts and ILS specialists, BFS offers comprehensive ILS Services to support engineering and manufacturing organizations.

Our experienced team of ILS experts enables us to support you in engineering flexible and cost-effective solutions that are tailored specifically to your requirements.

Quality

BFS offers our customers a high degree of confidence backed by our reputation for long-term stability and reliability, stringent security measures and ISO 9001:2009-certified quality assurance practices as a GSA approved contractor.

Integrated Logistics Support

Markets Served

Aerospace
Automotive
Defense
Marine
Mass Transportation
Manufacturing
Energy

e-Business

BFS offers its clients the benefits of a cutting-edge e-business tool that allows suppliers and buyers to be faster and more responsive in business dealings, while reducing operating costs, gaining access to new business and accelerating the Purchase Order lifecycle at the same time.

ILS Solutions Overview

BFS offers ILS capabilities in the following key areas:

- Computer Resources Support
- Continuous Acquisition & Life Cycle Support
- Design Influence & Concept Definition
- Field Service Representatives (FSRs) Deployment
- Level of Repair Analysis (LORA)
- Logistics Engineering
- Logistics Management Information (LMI)
- Logistics Program Support
- Logistics Support Technical Data
- Maintenance Planning & Support
- Manpower & Personnel
- Packaging, Handling, Storage and Transportation (PHS&T)
- Procurement Support
- Provisioning
- Reliability Availability & Maintainability (RAM) Support
- Supply Chain Support
- Support Equipment & Test, Measurement, & Diagnostic Equipment (TMDE)
- Training & Training Devices
- Transportation & Transportability
- Validation Support
- Warranty Administration & Monitoring

Maintenance Engineering Support

BFS provides Maintenance Planning early and throughout the acquisition process by developing a maintenance concept for achieving, restoring and maintaining the operational capabilities for all new and existing systems over the full life cycle. BFS can assist with the development/review of all Logistics Support documents and provide Maintenance Support, which includes preliminary inspection, disassembly, engineering support, modification, reassembly, fault isolation, repair, alignment, testing and final inspection. BFS can also develop recommendations and analysis for cost estimates with related documentation as required.

Depot Maintenance Program

When required, BFS supports Depot Maintenance Programs, which encompass depot (organic) and contractual overhaul programs. Services include, but are not limited to, supporting the control point for command and equipment by performing physical inventories of items at depot; administering the loan and customer compliant program; receiving; logging and processing reports of survey, inventory adjustment reports, and Reports of Discrepancy; maintaining project manager asset inventory accountability; serving as condition code coordinator; and providing technical assistance to storage activities.

Foreign Military Sales (FMS) Support

BFS provides a full range of support services for the security assistance/FMS program. Services include, but are not limited to, program/system management, production engineering, integration and technical support for equipment and telecommunication systems, technical assistance in design evaluation and analysis of weapons systems.
